

WASH

Con geometria essenziale e raffinatezza dei dettagli WASH offre un'illuminazione wall washer precisa e di effetto. Le diverse dimensioni e le moderne forme squadrate o curve per l'installazione a parete consentono configurazioni con luce verso il basso, verso l'alto o in entrambe le direzioni. Il vetro a filo scocca del diffusore intensifica l'effetto luminoso del LED ad alta efficienza: opale, con luce morbida diffusa; trasparente ultrawhite, con luce diretta ed incisiva, con la possibilità di indirizzare il flusso luminoso verso la parete o verso l'esterno. Le diverse finiture proposte incontrano i diversi stili di inserimento ed esaltano la finezza delle linee.

With essential geometry and refinement of details, WASH offers precise and effective wall washer lighting. The different sizes and modern square or curved shapes for wall installation allow configurations with light downwards, upwards or in both directions. The glass diffuser flush with the body intensifies the lighting effect of the high-efficiency LED: opal, with soft diffused illumination; ultrawhite transparent, with direct and incisive lighting, with the possibility of directing the luminous flux towards the wall or towards the outside. The different finishes proposed meet the different styles of insertion and enhance the refinement of the lines.

WASH

Struttura

Diffusore a filo in vetro temprato, opale o trasparente ultrawhite. Corpo in alluminio pressofuso in lega marina a basso tenore di rame.

Structure

Opal or ultrawhite clear tempered flush glass diffuser. Low copper content marine die-cast aluminium body.

Disponibile con doppia luce contrapposta e luce singola orientabile verso l'alto o verso il basso.

Available with double or single light that can be adjusted upwards or downwards.

Ottiche e vetri

Versione con modulo lineare LED e vetro opale per una luce diffusa e morbida. Versione LED COB con parabola asimmetrica riposizionabile e vetro trasparente ultrawhite per una luce diretta, nitida ed incisiva.

Optics and glass

Version with LED linear module and opal glass for a soft and comfortable light. Version with COB LED, adjustable asymmetric reflectors and ultra-white clear glass for a direct, sharp and incisive light.

Riposizionamento semplicissimo

La versione con vetri trasparenti è fornita con una o due parabole asimmetriche che possono essere individualmente riposizionate per orientare la luce verso la parete, accentuando l'effetto wall-washer, o verso l'esterno per illuminare i camminamenti.

La variazione della posizione delle parabole è semplice, agevole e può essere effettuata anche ad apparecchio installato. Sollevare la parabola e ruotarla di 180°, poi riposizionarla nella sua sede.

Simple reflector adjustment

The asymmetric reflector can be individually fixed in two different positions: towards the wall to highlight the wall-washer effect or adjusted outwards to illuminate balconies, walkways, corridors, etc.

It is quite simple to adjust the reflector: adjustment can be made even if the light is on. Unscrew, lift the reflector, turn 180° and screw.
